User Documentation

Allixir Intelligence transforms unstructured documents into connected, actionable knowledge. Users can upload or scan documents (e.g., medical reports, invoices), from which the system extracts domain-specific, meaningful data fields and organises them into a personalised knowledge base. An AI-powered voice/chat interface enables users to ask precise, context-aware questions and better understand their personal documents, as well as relationships and developments across their document history. At its core, the platform is designed to be domain-agnostic and configurable for a wide range of use cases.

[Installation](#)

Users can install the Android APK on an emulator or a real device. On Android Studio, you can install an APK by dragging and dropping it onto the emulator screen (see [docs](#)).

iOS apps cannot be signed right now, so they cannot be installed yet, because we do not have an Apple Developer account. Apple requires apps to be signed with an Apple-issued certificate, and developers must join the Apple Developer Program to sign and install apps on iOS devices.

Key Screens (quick walkthrough)

Login/ Sign Up Screen

Create a user or log in to use the app's functionality

Home / Dashboard

Access quick actions (New Chat , Documents), recent chats.

Chats

Create and continue LLM conversations about the imported documents.

(still in implementation)

Documents

Scan new documents or pick them from your phone's storage. Uploading selected documents will automatically trigger a knowledge extraction process where the system adds information from the uploaded documents to your knowledge base. The extraction status is displayed on each document.

15:01

Upload

Upload documents

Select PDFs or images and upload them securely to your workspace.

Files

No files selected yet
